

Asmaa Farouq

CS STUDENT · MACHINE LEARNING · SOFTWARE ENGINEERING ENTHUSIAST

+249 10 057 2377 | asmaafaruoq649@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE

Third-year Computer Science & AI student and active Kaggle/Zindi competitor with hands-on experience building and shipping software products end-to-end — from data analysis and machine learning models to full-stack web applications. Comfortable working in ambiguous, fast-moving environments, learning new tools quickly.

EXPERIENCE

AI Instructor — DSC Cairo University

- Conducted interactive workshops on AI/ML with engaging assignments and mini-projects that helped to increase student participation.
- Developed lesson plans and modules that were in line with the standards and presented difficult technical concepts to a layman.
- Collaborated with multidisciplinary teams to assess the progress of students and make necessary adjustments to lesson plans.

Technical Member — Google DSC Khartoum University

- Tutored students in AI concepts and led hands-on learning sessions, breaking down technical topics into clear, accessible explanations.
- Supported program operations and media output using Google Workspace, coordinating across a distributed volunteer team.
- Communicated technical initiatives clearly to a broad student audience, in writing and in person.

Volunteer Account Manager — Thankful Organization

- Managed and tracked donations supporting financially struggling students, maintaining transparency and donor trust.
- Partnered with fundraising teams to plan outreach and identify new community-support opportunities — early exposure to relationship management and resource allocation.

Graphic Designer & Content Writer — Student Association, University of Khartoum

- Designed visual content and wrote copy for university-wide campaigns and internal communications.
- Collaborated with a team to maintain a consistent, high-impact media presence.

PROJECTS

Mission249 — 3rd Place, Code for Sudan Hackathon — Team Project

- Co-built a web app that turns volunteering into simple, gamified daily missions, encouraging Sudanese youth to take part in rebuilding their communities after the war.
- Took the idea from concept to a working, demo-ready product under hackathon time pressure — validating a real 0-to-1 build cycle in a fragile, fast-changing context.

Maly — Personal Finance & Budgeting App — Team Project (Django)

- Built a budgeting web app with a teammate group, owning the admin configuration, AJAX/fetch-based interactivity, and documentation (Sphinx/pdoc).
- Applied and documented software design patterns to keep the codebase modular and maintainable — practical exposure to structuring a real product.

GeziraPal — Agricultural Knowledge-Sharing Platform

- Built a platform for sharing agricultural expertise, articles, and resources, helping communities access practical information on farming practices, crop cultivation, and sustainable agriculture alternatives.
- Worked hands-on with Python across the project, contributing to the platform's development, from building models to launching them.

EDUCATION

Bachelor of Computers and Artificial Intelligence — Cairo University

Currently entering third year.

SKILLS

Technical: Data analysis & visualization, ML model implementation, Python/C++, Django, design patterns, Git/GitHub

Professional: Problem-solving, analytical thinking, public speaking, classroom & project management, cross-team collaboration, content writing

ACHIEVEMENTS

- 3rd Place, Code for Sudan Hackathon — Mission249
- 9th out of 62 participants, Zindi ML competition
- 77th out of 1,200, Kaggle competition
